* Explanatory notes

- California does not require blood lead testing of all children. Blood lead test information is primarily based on testing done on at-risk populations. Testing requirements are at California Code of Regulations, TITLE 17, Division 1, Chapter 9, Screening for Childhood Lead Poisoning §37000- §37100
- Blood test results reported include capillary testing results which have not been confirmed by a venous test, as well as venous test results.
- The highest value for an individual child in a calendar year is reported in this table. Results which have been determined to be false positives or clerical errors are not included.
- We used the ZIP code where the child resided when they had their highest blood lead level (BLL) during 2012. Each child is counted only once.
- ZIP code information is not available for all blood lead tests. Since correct address information is sought to provide services for children with increased blood test results, testing information missing the ZIP code will primarily be lower blood lead values. This serves to skew information for individual ZIP codes to more heavily reflect higher blood lead tests, producing a higher apparent proportion with elevated levels. The proportion of test results missing zip code varies among health jurisdictions in California, and from year to year.
- California is more protective than current national guidelines and regards blood lead values at and above 4.5 mcg/dL as equivalent to the Centers for Disease Control and Prevention reference value of 5 mcg/dL. In 2012, 14% of the results at and above 4.5 mcg/dL were in the range 4.50-4.99 mcg/dL.
- Data is provisional and subject to revision.
- Prepared by the California Department of Public Health Childhood Lead Poisoning Prevention Branch
